

Brush insulating strip, for reduced guide

Description

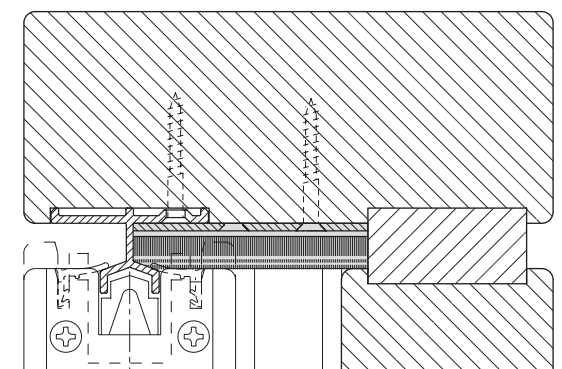

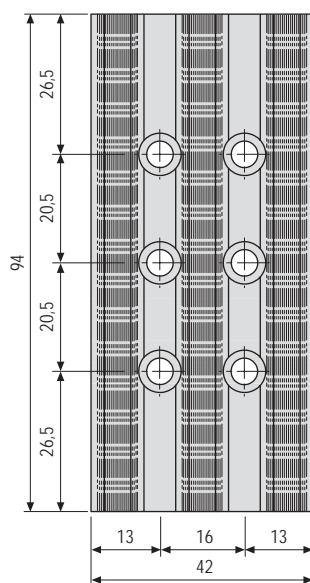

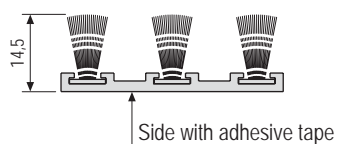

Brush insulating strip, for reduced guide with bristle.

Application

The reduced height of the strip allows the use even in windows where the reduced top guide is used.

Mounting

Cut the brush insulating according to the strip thickness of the sash, the distance between the sashes and the opening scheme. Position the plug with double-face adhesive tape and fix it with 4x25 screws. Insert the guide profile in the milling by making it slide under the end of the plug.
